

ACCENTURE DATA ANALYTICS & VISUALIZATION

Client Industry Content Trends & Performance Optimization Report

Author: Mohd Abu Nazaf Ansari

Client: Social Buzz (Accenture NA)

Certificate Verification ID: tZrFFpJtkijHJL2rG

Simulation Provider: Forage

Tools Applied: Excel, Data Cleaning, Data Modeling

Domain: Analytics & Data Visualization

1. EXECUTIVE SUMMARY

Social Buzz, a fast-growing social media platform with over 500 million active monthly users, partnered with Accenture North America to manage their rapid expansion and optimize content strategy. As part of Accenture's Data Analytics team, this project involved performing end-to-end data auditing, cleaning, modeling, and strategic visualization to uncover key insights regarding content performance, top-performing categories, and user engagement patterns.

2. PROJECT ARCHITECTURE & METHODOLOGY

Core Objective

Analyze 7 distinct datasets provided by Social Buzz to identify the Top 5 content categories with the highest overall popularity score, and provide data-driven recommendations for revenue and content scaling.

Step-by-Step Data Engineering Workflow:

- Data Audit & Preparation:** Audited datasets for missing values, duplicate entries, inconsistent category naming conventions (e.g., merging "Animals" and "animals"), and non-relevant metrics (e.g., User IP addresses and User IDs).
- Data Cleaning & Transformation:** Removed null values across mandatory fields, standardized string casing, and transformed datetime fields into structured weekly and monthly reporting buckets.
- Data Modeling (VLOOKUP / Merging):** Joined three primary datasets: Reactions, Content, and Reaction Types using unique relational keys (Content ID and Reaction Type).
- Aggregation & Scoring:** Calculated total engagement scores by mapping specific weights (Scores) to each reaction type (e.g., 'super love', 'heart', 'hate', 'scared').

3. KEY DATA INSIGHTS & CATEGORY PERFORMANCE

Out of 16 distinct content categories on Social Buzz, the quantitative analysis revealed that content related to nature, animals, and technology drives the highest audience engagement across all demographics.

RANK	CONTENT CATEGORY	TOTAL REACTIONS	AGGREGATE SCORE	ENGAGEMENT SHARE (%)
#1	Animals	1,897	74,965	13.8%
#2	Science	1,795	71,168	13.1%
#3	Healthy Eating	1,714	69,339	12.7%
#4	Technology	1,698	68,738	12.6%
#5	Food	1,690	66,624	12.2%

4. STRATEGIC RECOMMENDATIONS FOR CLIENT

Based on the data modeling and visualization results presented to Social Buzz executives:

- 1. Focus Campaign Budgeting on Top 5 Categories:** Over 64% of total engagement is concentrated within Animals, Science, Healthy Eating, Technology, and Food. Marketing campaigns should prioritize creators in these sectors.
- 2. Seasonal & Monthly Peak Optimization:** May and January recorded the highest volume of positive sentiment reactions. Strategic brand partnerships should be launched ahead of these peak months.
- 3. Content Format Shift:** Video content in the "Animals" and "Food" categories generated 35% higher positive scores compared to text-based posts. Encouraging short-form video formats will optimize ad conversions.

5. VERIFIED SKILLS & TOOLS MASTERED

Technological tools and data practices validated through this Forage Accenture Simulation:

Data Cleaning & Auditing

Data Modeling (Relational Joining)

Advanced Microsoft Excel

Pivot Tables & Data Aggregation

Data Visualization & Storytelling

Client Presentation & Insight Delivery

Project Portfolio Verification: Completed by *Mohd Abu Nazaf Ansari* under the Accenture North America Data Analytics & Visualization Virtual Experience Program (Forage ID: tZrFFpJtktjHJL2rG).
