Financial Performance & Budget vs. Actual Variance Analysis

P&L Reporting, Cost Center Optimization & Revenue Forecasting

- Advanced Excel
- Financial Modeling
- SQL Financial Queries
- Power BI Dashboard

1. Executive Summary

Evaluated quarterly P&L performance across 4 operating divisions. Built automated Budget vs. Actual variance models to isolate operational expense overruns, optimizing operating cash flow and improving net profit margins.

2. Financial Performance KPIs

GROSS REVENUE \$4.2M +8.4% vs Budget	NET OPERATING PROFIT \$890K 21.19% Margin	OPEX VARIANCE +\$125K Unfavorable Overrun	EBITDA GROWTH 14.2% YoY Expansion
--	---	---	---

3. Business Unit Financial Breakdown

Division	Target Budget	Actual Revenue	OpEx Overrun	Net Margin
Digital Products	\$1,800,000	\$2,050,000	+\$25,000	28.4%
Enterprise Consulting	\$1,200,000	\$1,280,000	+\$40,000	22.1%
Retail Hardware	\$1,000,000	\$870,000	+\$60,000	9.2%

4. Financial SQL Query & Automated Modeling

```
-- Budget vs Actual Variance & Margin Analysis
SELECT Division, SUM(Actual_Revenue) AS Revenue,
SUM(Budget_Revenue) AS Target, ROUND(((SUM(Actual_Revenue) - SUM(Budget_Revenue)) / SUM(Budget_Revenue)) * 100, 2) AS Variance_Pct,
ROUND((SUM(Net_Profit) / SUM(Actual_Revenue)) * 100, 2) AS Net_Margin_Pct FROM financial_ledger
GROUP BY Division HAVING SUM(Actual_Revenue) > 0;
```

5. Financial Control Recommendations

1. Restructure Retail Hardware Supply Chain: Retail Hardware missed revenue targets by 13% while exceeding OpEx budget by \$60K due to logistics delays. Switching to local distributors will recover 4% margin.
2. Reallocate Capital to High-Margin Digital Segment: Digital Products produced 28.4% net margins with minimal budget variance. Shifting \$150K marketing budget here yields an estimated \$340K incremental ROI.
