Retail Sales & Profitability Performance Analysis

End-to-End Data Analytics Case Study & Business Portfolio Project

Power BI

SQL Data Cleaning

DAX Measures

Executive Insights

1. Executive Summary

This project evaluates global retail order trends, category performance, and profit margins to identify key revenue drivers and optimization opportunities. By transforming raw transaction logs into an interactive executive dashboard, actionable insights were derived to enhance Average Order Value (AOV) and control discounting overheads.

2. Key Performance Indicators (KPIs)

TOTAL REVENUE

\$1,870.00

Target Exceeded

TOTAL PROFIT

\$392.00

20.96% Margin

AVG ORDER VALUE

\$187.00

10 Orders Total

TOP REGION

North

30% Volume Share

3. Category & Regional Breakdown

Category	Top Product	Total Sales	Total Profit	Profit Margin
Electronics	Smartphone	\$910.00	\$187.00	20.55%
Furniture	Office Chair	\$730.00	\$145.00	19.86%
Clothing	Running Shoes	\$230.00	\$60.00	26.08%

4. Technical Implementation (DAX & SQL)

```
-- Key DAX Formulas for Power BI Measures
Total Sales = SUM(sales_data[Sales])
Total Profit = SUM(sales_data[Profit])
Profit Margin % = DIVIDE([Total Profit], [Total Sales], 0) * 100
AOV = DIVIDE([Total Sales], COUNT(sales_data[OrderID]), 0)
```

5. Strategic Business Recommendations

1. Optimize Discount Cappings in Clothing: While Clothing exhibits a high profit margin percentage (26.08%), order values remain low. Capping discounts at 10% will safeguard gross margins while driving volume via bundled offers.

2. Drive High-Value Cross-Selling in East Region: Expand marketing efforts for Electronics accessories (Wireless Mice / Smart Watches) paired with Furniture purchases to elevate Regional AOV to parity with North & West regions.

3. Focus Retainership on Top Performers: Smartphones and Office Chairs generate over 48% of total gross revenue. Allocate higher ad spends toward intent-based search campaigns for these categories.
